

W1B & S2 to Ness M1 via KAM

This technical note will provide details of connecting a Ness W1B (Part No 101-095 / 101-095B) or S2 (Part No 101-082) Keypad Reader to a M1 KAM Module.

i These steps are based on factory default settings

HOW TO CONNECT A W1B or S2 Keypad Reader to a Ness M1 KAM Module.

- 1) The W1B (101-095) and S2 (101-082) PIN / Prox reader can be left at the factory default..
NOTE: AS Default the S2 has SITE CODE 029 (This can be changed via S2 Programming options. Refer S2 manual for programming details)
- 2) The S2 (101-082) PIN / Prox reader as default is set to Address 0. When connecting to an M1 this address must be left at address 0.
- 3) The Weigand output (Green D0 and White D1) from the W1B / S2 is wired into the KAM D0 and D1 input.. Make sure a 2K2 EOL is fitted between RTE and 0 Volts (ground).
NOTE: KAM module must be Ver 1.1.1 OR Ver 1.1.5
- 4) Connect the Pink (ground) wire to the 0 Volt terminal to reference the weigand data..
- 5) Using Elk RP2 create a new user, tick the "User has access credential box" Set the site code to the card or PIN being used.
If the W1B (101-095 / 095B) is left at default then the PIN site code is left at 0.
If the S2 (101-082) is left at default then the PIN site code is left at 029 (29).
Ness Prox cards and Prox Fobs are normally 028 or 029 site code. This site code will be printed on the cards / fobs for you to confirm

6) Enter the Card / PIN number and a 12 Digit Hex number is generated. Tick the Access box and set the areas that the code will have access to. Click Send to Control.

User: 11 User's Name **Pin Code W1B**

User Code **000013480000** Generate a random code  Not Connected

User has an access credential instead of a code (card, fob, iButton, numeric prox keypad)

Site Code Card/PIN Number

Areas

This code works in the following areas:

1

2

3 (Except Area 1)

4

5 Note: At least one area must be selected.

6

7

8

User Authorizations

7) Go to RULES in Elk RP2 software and create the following rule for simple access control.. Click WHENEVER then Security/Alarms tab then Access tab.. A box will appear to set which keypad / KAM is the access point.

8) Click THEN, then Output On/Off tab, then select the output assigned to the keypad / KAM module. (see table below)

Keypad / KAM Address to Zone and Outputs

1 = Zone / Output 193	9 = Zone / Output 201
2 = Zone / Output 194	10 = Zone / Output 202
3 = Zone / Output 195	11 = Zone / Output 203
4 = Zone / Output 196	12 = Zone / Output 204
5 = Zone / Output 197	13 = Zone / Output 205
6 = Zone / Output 198	14 = Zone / Output 206
7 = Zone / Output 199	15 = Zone / Output 207
8 = Zone / Output 200	16 = Zone / Output 208
